

Отчёт по лабораторной работе №4

Работа с программными пакетами

Яковлева Дарья Сергеевна

13 сентября 2025

Российский университет дружбы народов, Москва, Россия

Цель работы

Получить навыки работы с репозиториями и менеджерами пакетов в Linux.

Выполнение лабораторной работы

```

===== Name & Summary Matched: user =====  
gnome-user-docs.noarch : GNOME User Documentation  
libuser.x86_64 : A user and group account administration library  
perl-User-pwent.noarch : By-name interface to Perl built-in user name resolver  
samba-usershares.x86_64 : Provides support for non-root user shares  
usermode.x86_64 : Tools for certain user account management tasks  
userspace-rcu.x86_64 : RCU (read-copy-update) implementation in user-space  
xdg-user-dirs.x86_64 : Handles user special directories  
===== Name Matched: user =====  
gnome-shell-extension-user-theme.noarch : Support for custom themes in GNOME Shell  
xdg-user-dirs-gtk.x86_64 : Gnome integration of special directories  
===== Summary Matched: user =====  
NetworkManager.x86_64 : Network connection manager and user applications  
PackageKit-command-not-found.x86_64 : Ask the user to install command line programs automatically  
accountsservice.x86_64 : D-Bus interfaces for querying and manipulating user account information  
anaconda-gui.x86_64 : Graphical user interface for the Anaconda installer  
anaconda-tui.x86_64 : Textual user interface for the Anaconda installer  
audit.x86_64 : User space tools for kernel auditing  
cachefilesd.x86_64 : CacheFiles user-space management daemon  
cockpit-machines.noarch : Cockpit user interface for virtual machines

Available Packages
Name           : nmap
Epoch         : 4
Version        : 7.92
Release        : 3.el10
Architecture   : x86_64
Size           : 5.6 M
Source         : nmap-7.92-3.el10.src.rpm
Repository     : appstream
Summary        : Network exploration tool and security scanner
URL            : http://nmap.org/
License        : LicenseRef-Nmap
Description    : Nmap is a utility for network exploration or security auditing. It supports
                  : ping scanning (determine which hosts are up), many port scanning techniques
                  : (determine what services the hosts are offering), and TCP/IP fingerprinting
                  : (remote host operating system identification). Nmap also offers flexible target
                  : and port specification, decoy scanning, determination of TCP sequence
                  : predictability characteristics, reverse-identd scanning, and more. In addition
                  : to the classic command-line nmap executable, the Nmap suite includes a flexible
                  : data transfer, redirection, and debugging tool (netcat utility ncat), a utility
                  : for comparing scan results (ndiff), and a packet generation and response
                  : analysis tool (nping).

Packager   : Rocky Linux Build System (Peridot) <releng@rockylinux.org>
Vendor     : Rocky Enterprise Software Foundation
URL        : https://lynx.invisible-island.net/
Summary    : A text-based Web browser
Description:
Lynx is a text-based Web browser. Lynx does not display any images,
but it does support frames, tables, and most other HTML tags. One
advantage Lynx has over graphical browsers is speed; Lynx starts and
exits quickly and swiftly displays web pages.

Welcome to Rocky Linux

Rocky Linux 10

Welcome to Rocky Linux

A community Enterprise Operating System

-----

Rocky Linux is an Enterprise Linux distribution based on the sources available from the
CentOS Project and Red Hat, Inc. used for CentOS Stream and Red Hat Enterprise Linux. Rocky
Linux intends to be binary compatible with the upstream distributions. The source code can be
found at our Rocky Linux Git Service.

Rocky Linux is developed by a diverse team of core developers, with various backgrounds and
skill sets that allow them to build, test, and provide Rocky Linux to the world. The core
developers are supported by an active user community as well, which includes many testers
from the Rocky Linux Testing Team, system administrators, system engineers, managers, core
Linux contributors, and Linux enthusiasts.

Rocky Linux has an active user community with many avenues to talk to, work with, or support
other Rocky Linux users, as well as responsive communication with the Rocky Linux core
development team. There are many ways to join and take part in the community: Mattermost,
IRC/Matrix, Forums, Email Lists, Reddit

Name       : dnsmasq  
Version    : 2.90  
Release    : 4.el10  
Architecture: x86_64  
Install Date: Mon 01 Sep 2025 06:49:00 PM MSK  
Group      : Unspecified  
Size       : 794976  
License    : GPL-2.0-only OR GPL-3.0-only  
Signature  : RSA/SHA256, Thu 22 May 2025 03:17:11 AM MSK, Key ID 5b106c736fedfc85  
Source RPM : dnsmasq-2.90-4.el10.src.rpm  
Build Date : Thu 31 Oct 2024 02:46:28 PM MSK  
Build Host : pb-6df20f45-04b4-477b-bded-5a041ce1b59d-b-x86-64  
Packager   : Rocky Linux Build System (Peridot) <releng@rockylinux.org>  
Vendor     : Rocky Enterprise Software Foundation  
VCS        : git:git://thekelleys.org.uk/dnsmasq.git  
URL        : http://www.thekelleys.org.uk/dnsmasq/  
Summary    : A lightweight DHCP/caching DNS server  
Description:  
Dnsmasq is lightweight, easy to configure DNS forwarder and DHCP server.  
It is designed to provide DNS and, optionally, DHCP, to a small network.  
It can serve the names of local machines which are not in the global  
DNS. The DHCP server integrates with the DNS server and allows machines  
with DHCP-allocated addresses to appear in the DNS with names configured  
either in each host or in a central configuration file. Dnsmasq supports  
static and dynamic DHCP leases and BOOTP for network booting of disk-less  
machines.

Документация и конфигурация dnsmasq

The screenshot shows a terminal window with a pink title bar. The title bar contains the text "dsyakovleva@dsyakovleva:/var/cache/dnf/appstream-8f18e4146890fdcf/packages - ..." and a window control icon. Below the title bar, the terminal displays the manual page for dnsmasq(8). The page is titled "dnsmasq(8)" and "System Manager's Manual". It includes sections for NAME, SYNOPSIS, and DESCRIPTION. The NAME section states that dnsmasq is a lightweight DHCP and caching DNS server. The SYNOPSIS section shows the command "dnsmasq [OPTION]...". The DESCRIPTION section provides a detailed overview of the program's functionality, including its role as a DNS, TFTP, PXE, router advertisement, and DHCP server, and its ability to provide coupled DNS and DHCP service to a LAN. It also describes its support for static address assignments, DHCP options, and its role as a proxy for PXE information.

dnsmasq(8) System Manager's Manual dnsmasq(8)  
  
NAME  
dnsmasq - A lightweight DHCP and caching DNS server.  
  
SYNOPSIS  
dnsmasq [OPTION]...  
  
DESCRIPTION  
dnsmasq is a lightweight DNS, TFTP, PXE, router advertisement and DHCP server. It is intended to provide coupled DNS and DHCP service to a LAN.  
  
Dnsmasq accepts DNS queries and either answers them from a small, local, cache or forwards them to a real, recursive, DNS server. It loads the contents of /etc/hosts so that local hostnames which do not appear in the global DNS can be resolved and also answers DNS queries for DHCP configured hosts. It can also act as the authoritative DNS server for one or more domains, allowing local names to appear in the global DNS. It can be configured to do DNSSEC validation.  
  
The dnsmasq DHCP server supports static address assignments and multiple networks. It automatically sends a sensible default set of DHCP options, and can be configured to send any desired set of DHCP options, including vendor-encapsulated options. It includes a secure, read-only, TFTP server to allow net/PXE boot of DHCP hosts and also supports BOOTP. The PXE support is full featured, and includes a proxy mode which supplies PXE information to clients whilst DHCP address allocation is done by another server.  
  
The dnsmasq DHCPv6 server provides the same set of features as the DHCPv4 server, and in addition, it includes router advertisements and a neat feature which allows naming for clients which use DHCPv4 and stateless autoconfiguration only for IPv6 configuration. There is support for doing address allocation (both DHCPv6 and RA) from subnets which are dynamically delegated via DHCPv6 prefix delegation.

Рис. 18: Конфигурация и скрипты dnsmasq

Контрольные вопросы

- `rpm -qf /usr/sbin/useradd` — поиск пакета по файлу
- `dnf group list`, `dnf group info` — работа с группами
- `rpm -Uvh package.rpm` — установка rpm из файла
- `rpm -qp --scripts package.rpm` — просмотр скриптов
- `rpm -qd package_name` — документация пакета
- `rpm -qf /path/to/file` — поиск пакета по файлу

Итоги работы

В ходе работы были изучены команды **dnf** и **rpm**.

Выполнены операции поиска, установки, удаления и анализа пакетов, а также работа с группами пакетов и документацией.
