Отчёт по лабораторной работе №5

Управление системными службами

Яковлева Дарья Сергеевна 19 сентября 2025

Российский университет дружбы народов, Москва, Россия

Цель работы

Получить навыки управления системными службами операционной системы посредством systemd.

You are in rescue mode. After logging in, type "journalctl -xb" to view system logs, "systemctl reboot" to reboot, or "exit" to continue bootup.
Give root password for maintenance
(or press Control-D to continue):
root@dsyakovieva:"# systemctl isolate reboot.target _
```

Рис. 12: Переключение в режим восстановления

Рис. 14: Установка graphical.target

Итоги работы

- · Проверка статуса: systemctl status vsftpd
- · Установка пакета: dnf -y install vsftpd
- · Запуск службы: systemctl start vsftpd
- · Добавление в автозагрузку: systemctl enable vsftpd
- Удаление из автозагрузки: systemctl disable vsftpd
- · Просмотр зависимостей: systemctl list-dependencies vsftpd

Изолируемые цели

- · Список активных целей: systemctl --type=target
- · Список всех целей: systemctl --type=target --all
- · Поиск изолируемых: grep Isolate *.target
- · Переключение в режим восстановления: systemctl isolate rescue.target
- · Перезагрузка системы: systemctl isolate reboot.target

Вывод

Были изучены принципы управления юнитами в systemd.

Продемонстрированы установка и настройка сервисов, работа с автозагрузкой, разрешение конфликтов и использование изолируемых целей.
